PROFESSIONAL SUMMARY

Senior Front-End Developer with 7+ years in web development, focused on React, TypeScript and Next.js, with production experience in Angular. At a 1,000+ employee product company, built six brand front-ends from scratch, own the shared UI component library and act as Release Captain for my stream. Comfortable on the back end with Node.js and Go, and have four years of fully remote work in distributed teams.

TECHNICAL SKILLS

Front end: TypeScript, JavaScript, React, Next.js, Angular, RxJS, HTML, CSS
State & data: Redux Toolkit, MobX, TanStack Query, Zod, REST API, WebSocket
Styling & UI: Tailwind CSS, SCSS, CSS Modules, design systems, responsive layout, accessibility
Testing: Jest, Vitest, React Testing Library, MSW, Playwright, Storybook
Tooling: Vite, Webpack, Git, CI/CD (GitLab CI, GitHub Actions), Docker
Back end: Node.js, NestJS, Express, Go, MongoDB, MySQL, PostgreSQL
AI tooling: Claude Code, Cursor, GitHub Copilot, Anthropic Claude API

PROFESSIONAL EXPERIENCE

Front-End Developer

BrainRocket | Lisbon, Portugal (On-site) | June 2024 – Present
Product IT company (1,000+ employees) building high-load consumer web platforms.

- Develop a new plugin-based widget platform on the core team since the start of development. A host site installs one integration package, and a loader driven by remote configs decides which plugin bundles to load and runs each plugin in isolation.
- Write solution designs for plugins on the widget platform and take them through review into implementation. Each design defines the core state model and the REST and WebSocket contracts with the back end.
- Built and launched six brand front-ends from scratch under different regulatory regimes, and maintained 10+ live brands. Shipped country-specific builds into seven regulated markets across North America, Europe, Latin America and Africa, including New Jersey, Sweden and Denmark.
- Act as Release Captain for my stream, shipping one to three production releases a week and 100+ over two years. Wrote the release, branching and code-style conventions the stream works to. Review merge requests and mentored four developers through onboarding.
- Own the shared UI component library and the SCSS/BEM style architecture behind it, used across all applications on the platform.
- Drove automated test coverage on a codebase that started with almost none, using Jest/Vitest, React Testing Library and MSW. On the widget platform, write Vitest browser-mode tests in real Chromium and Playwright acceptance tests against sandboxes on local and staging environments.
- Spent over a year on the Angular side of the platform with RxJS and NgRx, building shared libraries across the payments, user account and content domains. Integrated a third-party payment gateway widget into the product cashier, from runtime script loading to its mount and teardown lifecycle.

Tech stack: React, TypeScript, Angular, RxJS, NgRx, TanStack Query, Zod, SCSS, Vite, Playwright

Front-End Mentor (part-time)

BRO Academy | Remote | July 2025 – December 2025
Technology training center run by BrainRocket.

- Mentored students of a front-end development course alongside my main role. Reviewed their homework with written feedback and supported them with questions between classes.

Front-End Developer

REnumber Lab | Fully remote | November 2023 – June 2024
IT consulting and outsourcing company delivering web products for external clients.

- Led a complete redesign of a marketplace platform with React, Next.js and TypeScript, from front-end architecture through delivery.
- Developed the admin panel and the client-facing front end for a business SMS messaging product.
- Added a new SMS operator to a business messaging product end to end, from the NestJS back end to the React front end.

- Integrated front-end features with Node.js/Express.js and .NET back ends, refining REST API contracts together with the back-end teams.

Tech stack: TypeScript, React, Next.js, Tailwind CSS, MobX, SCSS, Node.js, NestJS, MongoDB, GitHub Actions

Front-End Developer

NumFin Global | Fully remote | October 2022 – November 2023

Financial analytics product covering companies across 70 stock exchanges.

- Built and optimized React, TypeScript and Next.js pages, with MobX stores per page hydrated from server-side rendering.
- Localized a server-rendered Next.js product into 27 languages with next-i18next and react-intl, with locale-aware routing and translations loaded per page on the server.
- Built the technical SEO layer: schema.org structured data for company, financials and FAQ pages, Open Graph and Twitter cards, canonical and hreflang tags. Served dynamic sitemaps split into chunks across thousands of stock pages.
- Integrated Stripe Elements card payments for monthly and annual subscriptions, and built the paywall that blurs premium table data for guests and non-subscribers.
- Built and deployed back-end services in Go on MySQL: new REST endpoints, server-side Stripe integration and Google sign-in.

Tech stack: TypeScript, React, Next.js, MobX, SCSS Modules, Chart.js, Stripe, Go, MySQL, Docker

Front-End Developer

Citymobil | Fully remote | April 2020 – September 2022

Ride-hailing platform operating in 80+ cities, corporate client product.

- Developed React and TypeScript components with Redux for corporate client dashboards, built as single-page applications, covering trip limits, employee access controls and invoice exports, from Figma layouts.
- Converted legacy JavaScript components in internal tools to TypeScript to reduce runtime type errors.
- Covered core form interactions and UI components with unit tests in Jest and React Testing Library.

Tech stack: JavaScript, TypeScript, React, Redux, CSS Modules, REST API, Jest, React Testing Library

Web Developer (Freelance, part-time)

Self-employed | Fully remote | November 2019 – April 2020

- Developed landing pages, web interfaces and interactive components for small business clients using JavaScript, HTML5, CSS3/SCSS and React.

Petroleum Engineer

Oil and gas companies (various) | Russia | 2016 – 2020

- Delivered the full design, construction and operation cycle for fuel depot sites, coordinating contractors, budgets and regulatory approvals.

EDUCATION

- Master's Degree in Engineering (Oil and Gas Industry), Tyumen State Oil and Gas University, 2016 – 2019
- Bachelor's Degree in Engineering (Oil and Gas Industry), National Mineral Resources University, 2012 – 2016

COURSES & PROFESSIONAL DEVELOPMENT

- Python Programming Fundamentals and Databases for Python Developers, Netology, 2022 (certificates). Studied in my own time alongside my main role, to understand the back end of the products I build. Practised on a few small freelance projects in Python and Django, including e-commerce features and PostgreSQL database design.

LANGUAGES

English: C1, professional working proficiency | Russian: native | Portuguese: basic (A2, learning)
